

PRODUCT OVERVIEW

The DPF3103R REMOTE control unit is available in both wired and wireless (radio) formats, and interfaces with the processing network via a 1U rackmounting unit, or by direct midi connection for working locally, as in fixed installation programming.

The Remote features full duplex editing, meaning that the information displayed on the Remote Control screen is a real time feedback of the settings of the digEQ unit being controlled, guaranteeing complete editing security. The Remote can access up to 15 Slave units and is powered from the interface unit (wired version) or by rechargeable or standard D cells for the wireless version, or from a 12V supply.

The Remote may also be operated off line, providing 98 virtual programs for later upload into the audio system.

When fitted with the optional Real Time Analyser (RTA) module and suitable microphone, the REMOTE becomes a fully functioning Analyser, complete with on-board Pink-Noise/Click generator.
