

MD8

8 Channel Active DI Box Rackmounting

PRODUCT OVERVIEW

The model MD8 is an eight channel Direct Injection box using advanced circuitry to provide very low noise and distortion.

Each channel has a high impedance input with link facility for connection to an instrument amplifier, and two outputs, one unbalanced and one electronically balanced.

Three switches offer high or low level input selection, output gain of 0 or 20dB and ground lift facility. The unit operates on phantom powering or on an internal supply.

The rack mounting design of the unit makes it suitable for synthesisers and drum machines in the studio and PA applications.
