

MLX20

Dual Mic/Line Preamp with DI Input

PRODUCT OVERVIEW

The MLX20 is a professional two channel Mic Preamplifier which also accepts Line levels and Direct Instrument connection.

The unit is designed around an ultra low noise input device with excellent common mode rejection resulting in signal amplification of exceptional clarity. The DI input circuit is FET based producing excellent sonic characteristics especially on bass instruments.

Front panel controls include Input Gain, Variable High Pass Filter and Output level control. Front panel switches provide selection between the rear panel Mic and Line inputs and the front panel DI socket. Phase Reverse and +48V Phantom Power switches are also included.

APPLICATIONS

The high degree of specification and performance the MLX20 offers makes it the ideal preamplifier for direct to analogue or digital recording of Mic, Line and Instrument sources.

The MLX 20 may also be used as a high quality active Dual DI unit.
